Proposed confirmatory protocol — not yet performed
1. Canonical recording groups
Sensor hashes + label versions
Keep aliases in the same group
2. Development only
Grouped inner validation
Choose architecture + thresholds
3. Freeze before new collection
Models, code, matching, exclusions
Declare hypotheses + budgets
4. New participants / new days
Strap refits + realistic negatives
No fitting or threshold changes
5. Continuous replay + live tasks
Catch / miss / repeat / late
Raw decision and action latency
6. Report all outcomes
Per-label and per-person results
Exposure + uncertainty + failures
